

West Java Sustainable Energy Initiative

Delivering Sustainable Solutions for Indonesia's Economic Heartland

Salis Investama, in strategic partnership with the Provincial Government of West Java (Pemprov Jabar), is advancing a landmark Waste-to-Energy (WtE) initiative to address one of the region's most pressing challenges. This project will transform municipal solid waste into renewable energy, reinforcing national energy security while enabling a cleaner, more sustainable future.

Why West Java, Why Now

West Java, Indonesia's most populous province, is at a tipping point. The Greater Bandung area alone generates thousands of tonnes of waste daily, pushing existing landfills beyond capacity and threatening public health and environmental stability.

This urgent situation creates a **compelling case for large-scale, modern waste management solutions**. By converting guaranteed long-term feedstock into renewable energy, this project is positioned as a bankable infrastructure asset with high environmental and social returns.

Partnership with the Provincial Government

At the core of this initiative is our **Memorandum of Understanding (MoU) with Pemprov Jabar**, which provides Salis Investama and its partners with a unique strategic advantage:

- **Formal Government Collaboration:** A recognized framework with strong political will and provincial support.
- **Privileged Access:** Direct channels to essential data, permitting processes, and stakeholder engagement.
- **De-risked Development:** Flexibility to shape a technically sound and commercially viable project before binding agreements, reducing early-stage uncertainty.

The Project Vision

While final specifications will be determined through feasibility studies, the project's preliminary scope includes:

Parameter	Detail
Project Name	West Java Sustainable Energy Initiative
Location	West Java, Indonesia
Asset Type	Waste-to-Energy Facility
Feedstock	Municipal Solid Waste (MSW)
Target Capacity	1,000 – 1,800 Tonnes Per Day
Project Model	Build-Operate-Transfer (BOT) / Public-Private Partnership (PPP)
Status	Pre-Feasibility Stage under Government MoU

Building a Landmark Asset Together

Salis Investama has secured the critical government alignment and development framework for this project. We now invite premier partners to join us in co-developing this transformative infrastructure asset.

We seek expressions of interest from:

- **Technical & Development Partners:** Firms with proven expertise in EPC and long-term operation of large-scale WtE facilities.
- **Capital Partners:** Institutional and private investors seeking stable, long-term returns from ESG-aligned infrastructure in Southeast Asia's most dynamic market.

Engage With Us

This initiative represents a rare opportunity to partner on a project that combines clear government backing, urgent market need, and long-term economic and environmental impact.

Further details—including pre-feasibility data and financial projections—are available for discussion with qualified parties under a non-disclosure agreement.
